Genomic DNA was isolated from strationary phase cells. For this library, DNA was sheared to give a tight size distribution of 1-1.5kb fragments, blunt-ended with T4 DNA polymerase, dephosphorylated with Shrimp Alkaline Phosphatase and ligated into pZero-2 vector's EcoRV site."

/Jab host="E. coli strain XL10-Gold, T1-resistant, F-"
/Jab host="E. coli strain XL10-Gold, T1-resistant, F-"
/Jab host="Jax.org/resources/documents/dnares/). The DNA
was blydrodynamically sheared by repeated from the Jackson
[Ahttp://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was hydrodynamically sheared by repeated by a polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gil4732114|gb]AF129072.1), a copy-number
inducible derivative of plasmid RI. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DOMAIN: THE N-TERMINAL PART SEEMS TO BE A MYOSIN/CALMODULIN-BINDING DOMAIN, AND THE C-TERMINAL A TROPOMYOSIN/ACTIN/CALMODULIN-BINDING DOMAIN. THESE TWO DOMAINS ARE SEPARATED BY A CENTRAL HELICAL REGION IN THE MUSCLE FORMS.
PTM: IN NON-WUSCLE CELLS, PHOSPHORYLATION BY CDC2 DURING MITOSIS CAUSES CALDESMON TO DISSOCIATE FROM MICROFILAMENTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hayashi K., Yamada S., Kanda K., Kimizuka F., Kato I., Sobue K.; "35 kDa fragment of h-caldesmon conserves two consensus sequences of the tropomyosin-binding domain in troponin T."; Biochem. "Evidence that the immunity protein inactivates colicin 5 immediately prior to the formation of the transmembrane channel.";

J. Bacteriol. 177:6966-6972(1995).

-! FUNCTION: THIS COLICIN IS A CHANNEL-FORMING COLICIN. THIS CLASS OF TRANSMEMBRANE TOXINS DEPOLARIZE THE CYTOPLASMIC MEMBRANE, LEADING TO DISSIPATION OF CELLULAR ENERGY.

-! FUNCTION: COLICINA ARE POLYEPPIDE TOXINS PRODUCED BY AND ACTIVE AGAINST, ESCHERICHIA COLI AND CLOSELY RELATED BACTERIA.

-! SIMILARITY: BELONGS TO THE CHANNEL FORMING COLICIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                        MDDFERRELRROKREEMRLEAER -> MISRSYCRONLS

-1- FUNCTION: MITOSIS-SPECIFIC CHROMOSOME SCAFFOLD PROTEIN THAT
COLOCALLIZES WITH TOPOISOMERASE II. MAY FUNCTION IN CHROMOSOME
CONDENSATION OR SISTER CHROMATID DISJUNCTION.
-1- SUBCELLULAR LOCATION: NUCLEAR. LOCATED ALONG THE ENTIRE LENGTH OF
THE CHROMATID ARM AXIS.
-1- DOMAIN: CONSISTS OF TWO PUTATIVE CENTRAL COLLED-COLL REGIONS
FLANKED BY PUTATIVE GLOBULAR REGIONS AT THE N- AND C-TERMINUS.
-1- SIMILARITY: BELONGS TO THE SMC FAMILY.
                                                                                                                                                                                                                                                                                    EDKEATTAIEAASSDALEALADOTDALQSEEAAVVKADNAASDALEALADQTDALQSEEA 105

Natl. Acad. Sci. U.S.A. 94:9384-9388(1997).

-! FUNCTION: SbcCD cleaves DNA hairpin structures. These structures can inhibit DNA replication and are intermediates in certain DNA recombination reactions. The complex acts as a 3'-5' double strand exonuclease that can open hairpins. It also has a 5' single-strand endonuclease activity (By similarity).
-! SUBUNIT: Heterodimer of sbcC and sbcD (By similarity).
-! SIMILARITY: BELONGS TO THE SMC FAMILY. SBCC SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Vicek C., Paces V., Maltsev N., Paces J., Haselkorn R., Fonstein M.; "Sequence of a 189-kb segment of the chromosome of Rhodobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
